

Jason Cochran

HANDS-ON SOFTWARE + APPLICATION ARCHITECT

Midland, TX · Remote, United States jlcochran2013@gmail.com jasoncochran.io linkedin.com/in/cochranjason github.com/strataga

Hands-on software and application architect with 28 years of experience translating business workflows into secure, maintainable enterprise applications. Leads discovery, system design, web and mobile delivery, integrations, modernization, migration, and technical handoff while staying close to the code.

ARCHITECTURE AND ENGINEERING STRENGTHS

- Architecture discovery and business-to-technical translation
- Application architecture, system boundaries, domain-driven design, and API integration
- Enterprise workflow modernization, migrations, and delivery planning
- TypeScript, React, Next.js, Node.js, NestJS, and React Native
- AWS-hosted application delivery and Azure fundamentals
- Applied AI integration, evaluation planning, and human approval controls
- PostgreSQL, CI/CD, observability, operational handoff, and runbooks
- Client communication, technical presentations, mentoring, and handoff

SELECTED EXPERIENCE

Senior Full-Stack Engineer · Servant February 2025 – September 2025

- Delivered an EMA onboarding flow with NestJS, Next.js, Prisma, React Query, and AWS-hosted services.
- Owned the production migration from the legacy onboarding path to the new NestJS flow, then completed documentation and operational handoff before the role ended.

Senior React Native Engineer · Nutrien September 2023 – February 2024

- Built cross-platform iOS and Android features for field representatives in agriculture operations.
- Delivered offline-first data collection and workflow screens that synchronized when connectivity returned.

Senior Software Engineer · TxMQ October 2022 – June 2023

- Led an OpenAI research initiative that prototyped LLM-assisted internal tools on existing AngularJS and Ionic client surfaces.
- Delivered production client features while exploring practical applied-AI use cases and communicating findings to technical leadership.

Senior Mobile Engineer · Verizon October 2021 – November 2022

- Delivered the AMC Walking Dead NFT experience through a custom blockchain and JavaScript SDK integration in the Verizon mobile application.
- Built and documented the JavaScript SDK handoff used by downstream teams consuming the integration.

Solutions Architect · Self-employed 2015 – 2021

- Delivered more than 30 projects across oil and gas, travel, and enterprise environments, including work for Key Energy, Warren Equipment, Enertia, and OneTravel.com.
- Worked directly with clients to define workflows, choose practical architecture, build software, and support delivery.

SELECTED PROJECTS

ArchGauge · In development

Open-source architecture and production-readiness review platform designed to combine deterministic evidence checks, cited AI-assisted findings, reproducible scoring, and human approval.

jasoncochran.io/projects/archgauge

OpenClaw VPS · Archived personal project; no longer online

Explored managed deployment and operational controls for private AI assistants. Retained as an archived engineering project, not a live service.
